Enterprise Applications AI Integration Engineer | Colorado PERA

Cover letter

Computers felt like magic to me as a kid, and the feeling stuck even after I learned how to take them apart. The work I enjoy most now is taking a process that makes perfect sense to the people who do it every day and figuring out how to make the software fit around them.

At Office Evolution, receptionists needed to handle ordinary Wi-Fi issues without becoming network administrators. I wrote Node.js tooling to provision routers and firewalls and built a front-desk portal for the common tasks. At Technomancy IT, I ran into the same problem at a different scale: information about a client's support, scheduling, billing and devices lived in separate workflows. I brought those together in a TypeScript and PostgreSQL platform, kept client and staff access separate, and built checks for deployments and backup restores.

Colorado PERA's role caught my eye because it puts the engineers who build an integration close to the people who rely on it. I've built access-controlled integrations for SaaS and AI tools, and I've also taken the call when production systems fail. I'd bring both habits to the job: understand the handoff first, then make it possible to check what the system did and recover if something goes wrong.
